

Human Body: Endocrine System Review

Essential Question: What are the locations, hormones, and regulatory functions of the 9 glands and organs in the endocrine system?

Objective: Review endocrine system information for test preparation.

Without using any resources, fill in this table.

Gland	Hormone(s)	Regulatory function(s)
1. Hypothalamus		
2. Pituitary gland		
3. Pineal gland		
4. Thyroid gland		
5. Parathyroid gland		
6. Thymus gland		
7. Pancreas		
8. Adrenal gland		
9. Ovary/testis		

Complete the simile:

The endocrine system is like a thermostat because:

Compare and contrast *positive* and *negative* feedback loops. Give an example of each type of loop using an endocrine gland or organ.

Identify the 9 endocrine glands and organs on the figure at right. You may sketch them, use a symbol, or label them using the term.

Use this diagram for sketching and labeling.
