## SHEMAR COOMBS

Philadelphia, Pennsylvania

Age 19 at the time of innovation

**ACHIEVEMENT: INVENTED  
A CELLPHONE CASE THAT  
KEEPS HEADPHONE CORDS  
TANGLE-FREE**

Sometimes school assignments can spark your imagination and creativity. That's what happened with Shemar.

Shemar had an assignment. It was to produce a product that could change the world. As he was brainstorming ideas, he wanted to listen to music, but his earbud cords were tangled. That's when his idea came to him! He would create a product that makes earbud cords less awkward.

Shemar developed a new type of cellphone case. He used computer-aided design software and a 3-D printer to create it. The case has a "lip" along its edge. This lip, or channel, holds the cord. It allows headphones to be easily wrapped and secured while remaining tangle-free. He named the product Rap-It-Up. He built a prototype with help at a makerspace lab.

Shemar hopes to see Rap-It-Up displayed on store shelves for sale one day.
