Objectives

- Dissect a preserved cow eye.
- Learn eye anatomy while relating structure and function.
- Discuss common eye disorders.

Meet Your TEKs

- **Middle School (Grade 7)**
  - TEKS 112.27.b.5.D&F: Interdependence of system parts; Structure and function
  - TEKS 112.27.b.13.A&B: Organisms and environments

- **High School Biology**
  - TEKS 112.42.c.12.A. System interactions

Carolina's Perfect Solution® Specimens

Quality

- Superior preservation
- Superior tissue color and texture

Safety

- No dangerous off-gassing
- No formalin odor

Unauthorized reproduction, distribution, or display of copyrighted materials is prohibited.

Dissection Preparation Tips

- **Organize your dissection area:**
  - Take out your dissection tray
  - Put blue absorbent pad under the dissection tray
  - Lay out your instruments
    - Scissors
    - Scalpel
- **Use appropriate personal protective equipment:**
  Apron, gloves, safety goggles

Safety Requirements

- **Personal protective equipment**
  Apron, gloves, safety goggles
- **Dissection tools**
  Be diligent with sharp tools

Safety Tip
If you are not using an instrument, set it down.

Opening the Bag

1. At the anterior of the specimen, locate an area where there is excess plastic.
2. Force any fluid out of the area to prevent spills.
3. Cut a small hole in the excess plastic. This will allow the fluid to drain to the bottom of the bag.
4. Continue to cut around the anterior of the specimen until you can easily remove the specimen from the bag.
5. Keep the bag upright until we collect the fluid and the bag.

External Anatomy

Locate the following:

- Cornea
- Optic nerve
- Surrounding fat and muscle

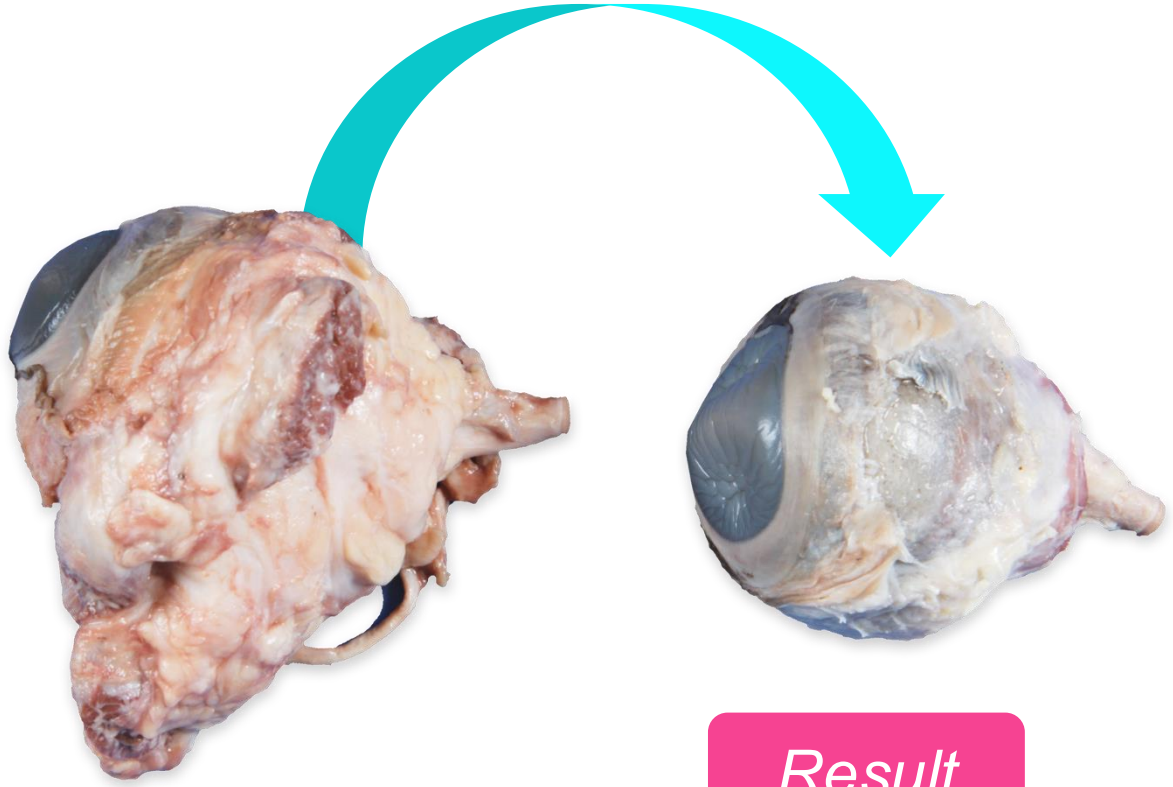

©2026 Carolina Biological Supply Company
Unauthorized reproduction, distribution, or display of copyrighted materials is prohibited.

External Anatomy

Remove the fat and muscle:

- Use your scissors.
- Don’t cut the optic nerve!

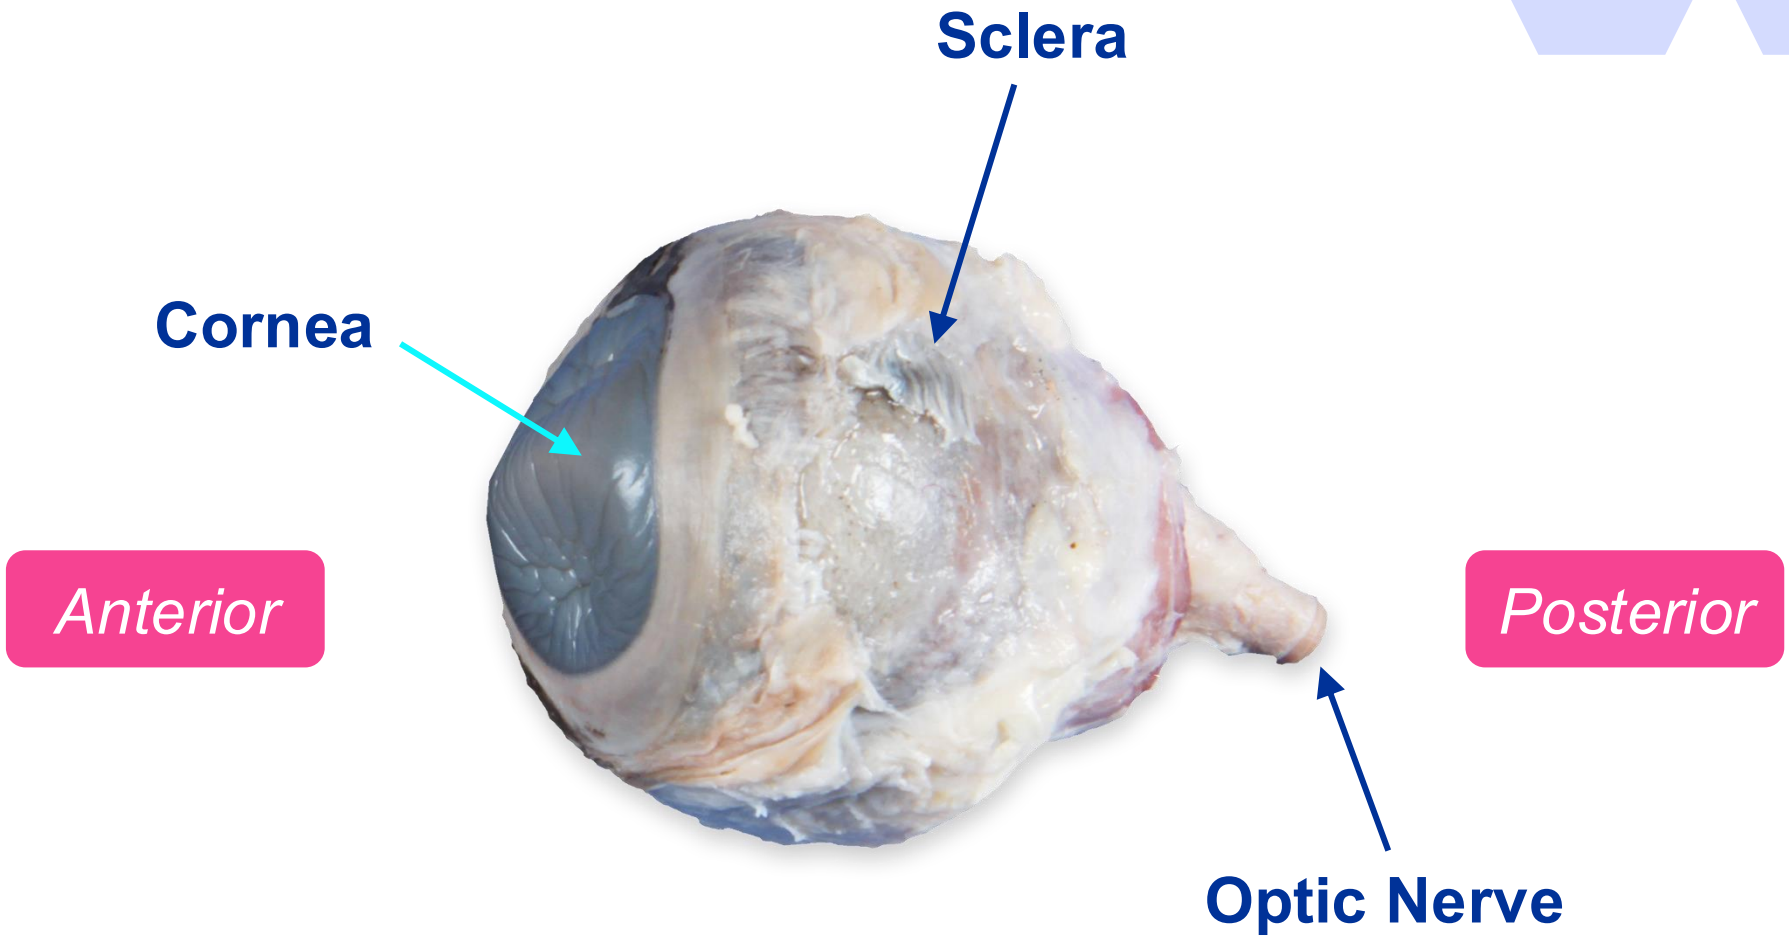

Hint:
Pull and flatten the tissue, then cut.

It’s Eye-Opening!

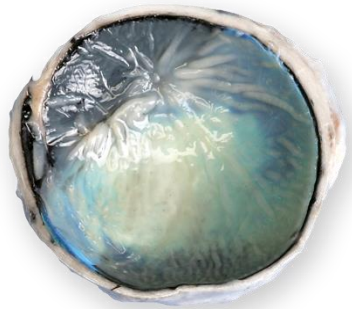

Cut a cross section as shown.

Teacher tip: *You may wish to start the incision with a scalpel and allow your students to finish with scissors.*

Anterior

Posterior

Separate the anterior and posterior halves of the eye.

Internal Anatomy: Posterior

Locate:

- Retina
- Blind Spot

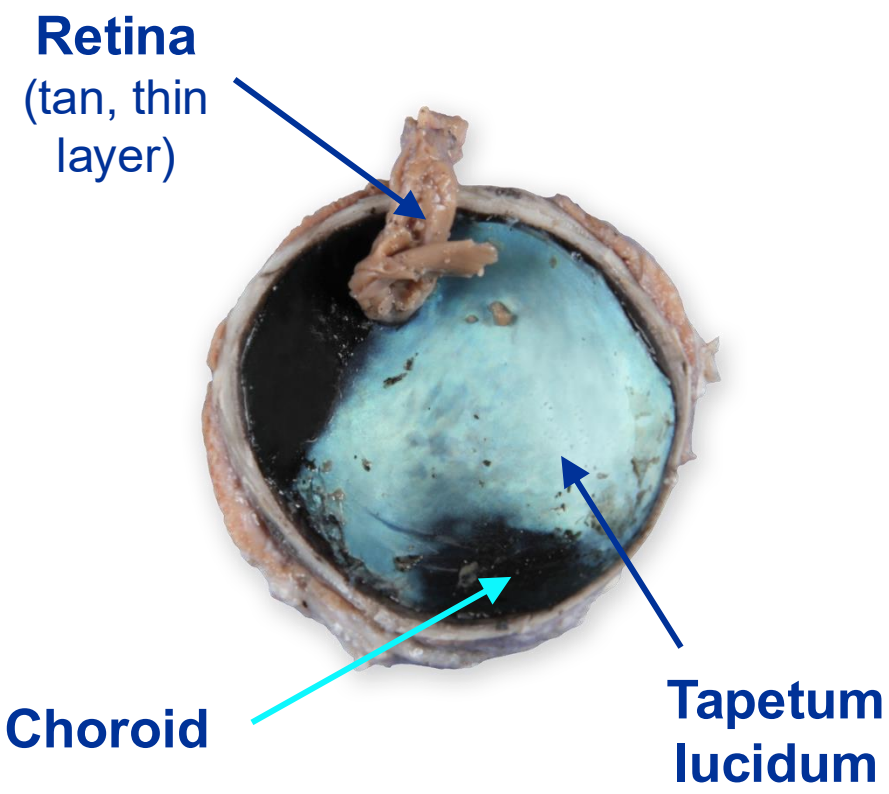

Retina

- Photoreceptor cells – rods and cones
- Sends visual impulses to the brain via the optic nerve

Unauthorized reproduction, distribution, or display of copyrighted materials is prohibited.

Internal Anatomy: Posterior

With your finger, gently move the retina so you can see the back of the eye.

Locate:

- Choroid
- Tapetum Lucidum

Internal Anatomy: Anterior

Remove:

- Vitreous humor
- Lens

Locate:

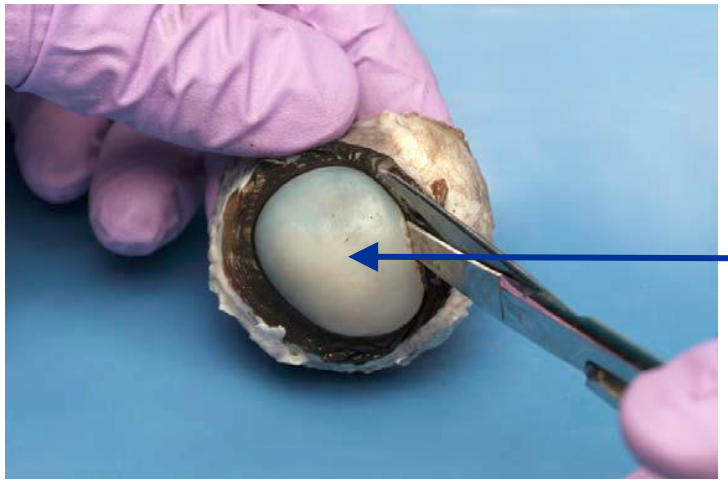

- Iris
- Pupil
- Ora Serrata
- Ciliary Body

Not pictured: Aqueous humor

Internal Anatomy: Anterior

Carefully cut through the thick cornea.

Tease the iris away from the inner surface of the eye.

Common Eye Disorders

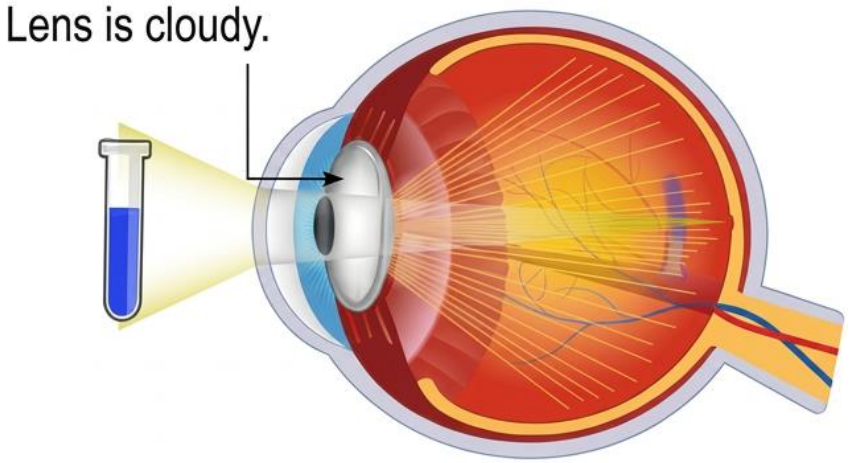

Characteristics:

- Biconvex
- Flexible
- Transparent
- Attached to suspensory ligaments of ciliary body

Functions:

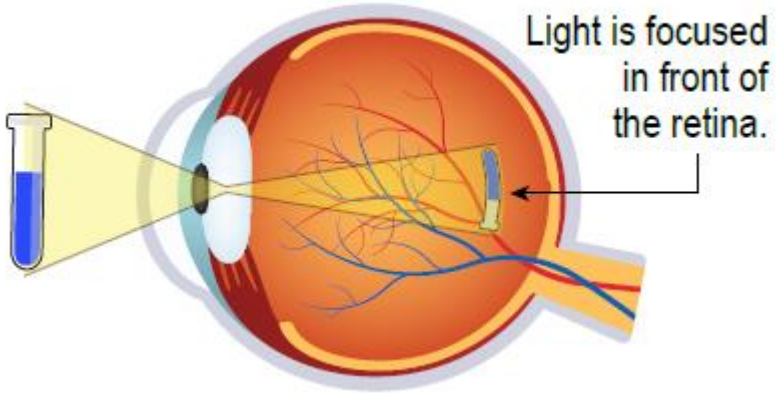

- Refracts light onto retina
- *Accommodation* – changes shape to adjust focal point
  - Curved – near objects
  - Flat – distant objects

Cataracts

Common Eye Disorders

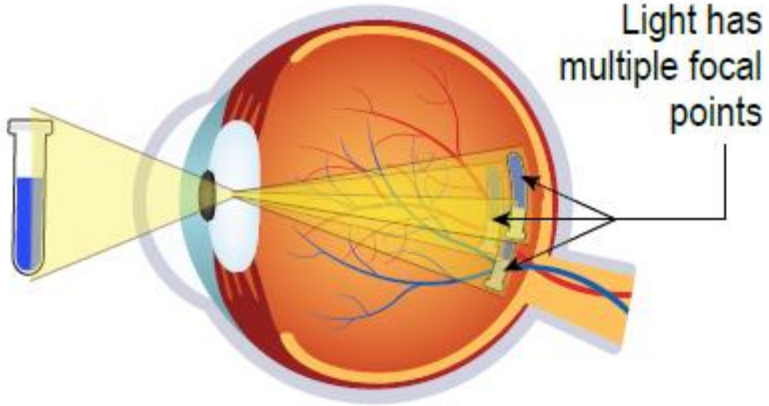

Myopia
(nearsightedness)

Refractive Errors

Hyperopia
(farsightedness)

Astigmatism

Cleanup Instructions

STOP!

- **KEEP GLOVES ON!**
- **Separate trash from animal material/waste.**
- **Carolina employees will come and collect ONLY animal waste. Place in buckets.**
- **All other trash goes in trash bags.**
- **Wipe off tools, mats, and tables.**
